2009 SOUTHEASTERN LIFECYCLE CONSTRUCTION CONFERENCE

Sustainable Design and Construction for this Generation and the Next

February 25-26, 2009

Sheraton Atlanta Hotel ♦ 165 Courtland Street NE ♦ Atlanta, GA 30303

What is Lifecycle Construction? Lifecycle construction examines the environmental and economic impacts and the overall sustainability of the construction process from planning to final use of the building.

Why should you attend? This is the first conference of its kind focused on the Southeast! We will examine issues that may have substantial impacts on design and construction in the Southeast such as: drought, congestion, diminished air quality, stormwater, energy costs, greenhouse gas emissions, and construction waste and recycling. The conference will consider the complete construction lifecycle-- site preparation, building materials selection, debris management, air pollution control, stormwater and sediment control, demolition, converting buildings for reuse, design for disassembly and creating buildings that facilitate and anticipate future changes. You will hear from Regional and National experts on the full construction lifecycle; and network with federal, state and local government officials and regulators.

Who should attend? We invite planners; developers; green vendors; contractors; architects; and federal, state, and local government officials in the Southeast who deal with the complex regional issues of design and construction in the Southeast.

Register Now!

Early-bird Registration EXTENDED to

January 31, 2009:

\$75.00

February 1, 2009 – February 25, 2009:

\$100.00

Onsite Registration:

\$125.00
