

Decoding Sustainable Living:

Proposing Green Solutions For a Sustainable Future

Conference & Educational Exhibition

Expand your vision of possibilities in the world of sustainable growth. Scientists, entrepreneurs and leaders from academia, industry and government will share research and development information on innovative solutions in clean energy, energy efficient, GHG emissions, financial and policy opportunities and resource management strategies that will help to mitigate the impact of climate change and help to build a green economy.

The Exhibition, is a unique opportunity to meet the region's investors, farmers, developers, engineers, purchasing agents, state and local government agencies who will showcase unique products, services and programs that promote climate change solutions through recycling, water-use efficiency, sustainable transportation, biofuels and renewable alternative energy development. **The Exhibition is FREE** to exhibitors and Florida citizenry.

The University of Florida, IFAS Extension in partnership with Lee County's Pollution Prevention Program are happy to invite you to its third annual Sustainability Conference and Educational Exhibition:
